Vault Agent
by SportiQue

THE PROBLEM

80 days

to move one dataset between institutions.

The data is ready. People coordinating and approving are not. We run a health research platform and hit this every week.

Median wait on one major clinical data-sharing platform · YODA Project dashboard, July 2026

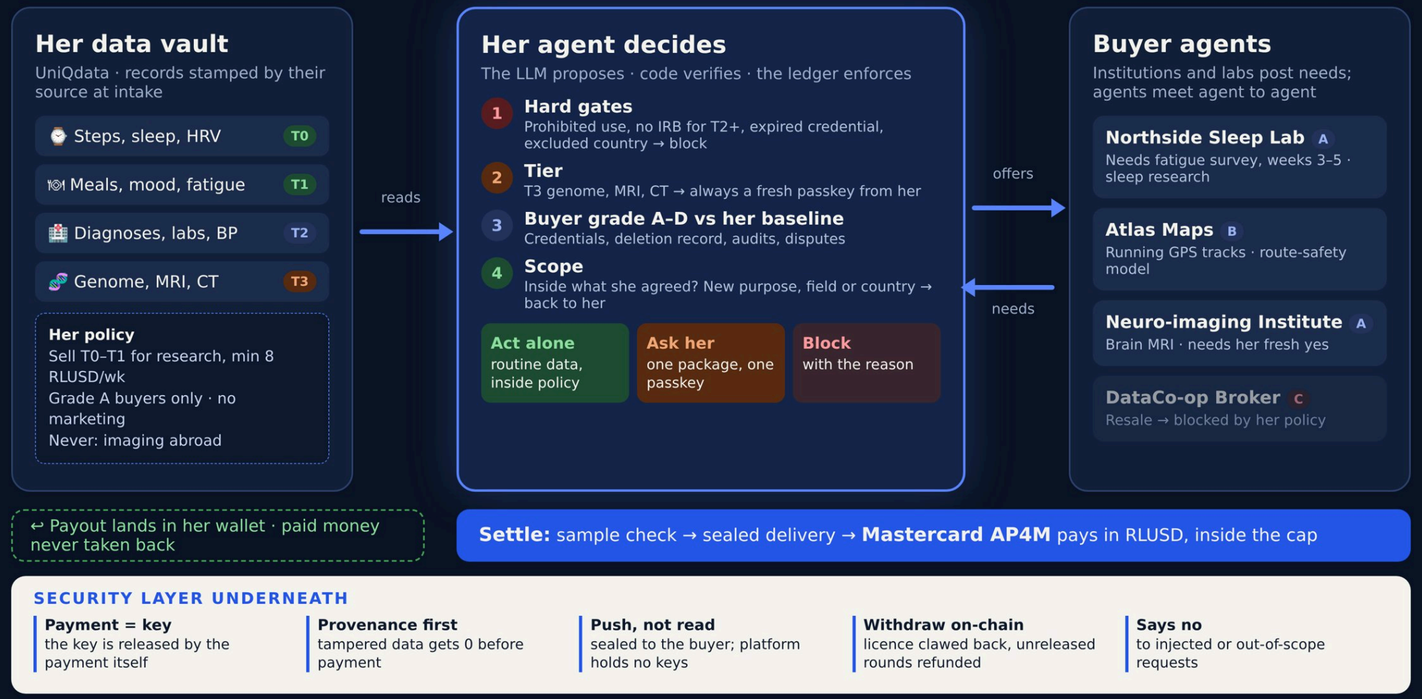

VAULT AGENT

Vault Agent
by SportiQue

Every data vault gets an agent that trades on its owner’s terms.

A personal data vault with its own agent

The agent reads her vault and her rules, decides on its own, finds the right buyer, negotiates and gets her paid. Sensitive data always waits for her.

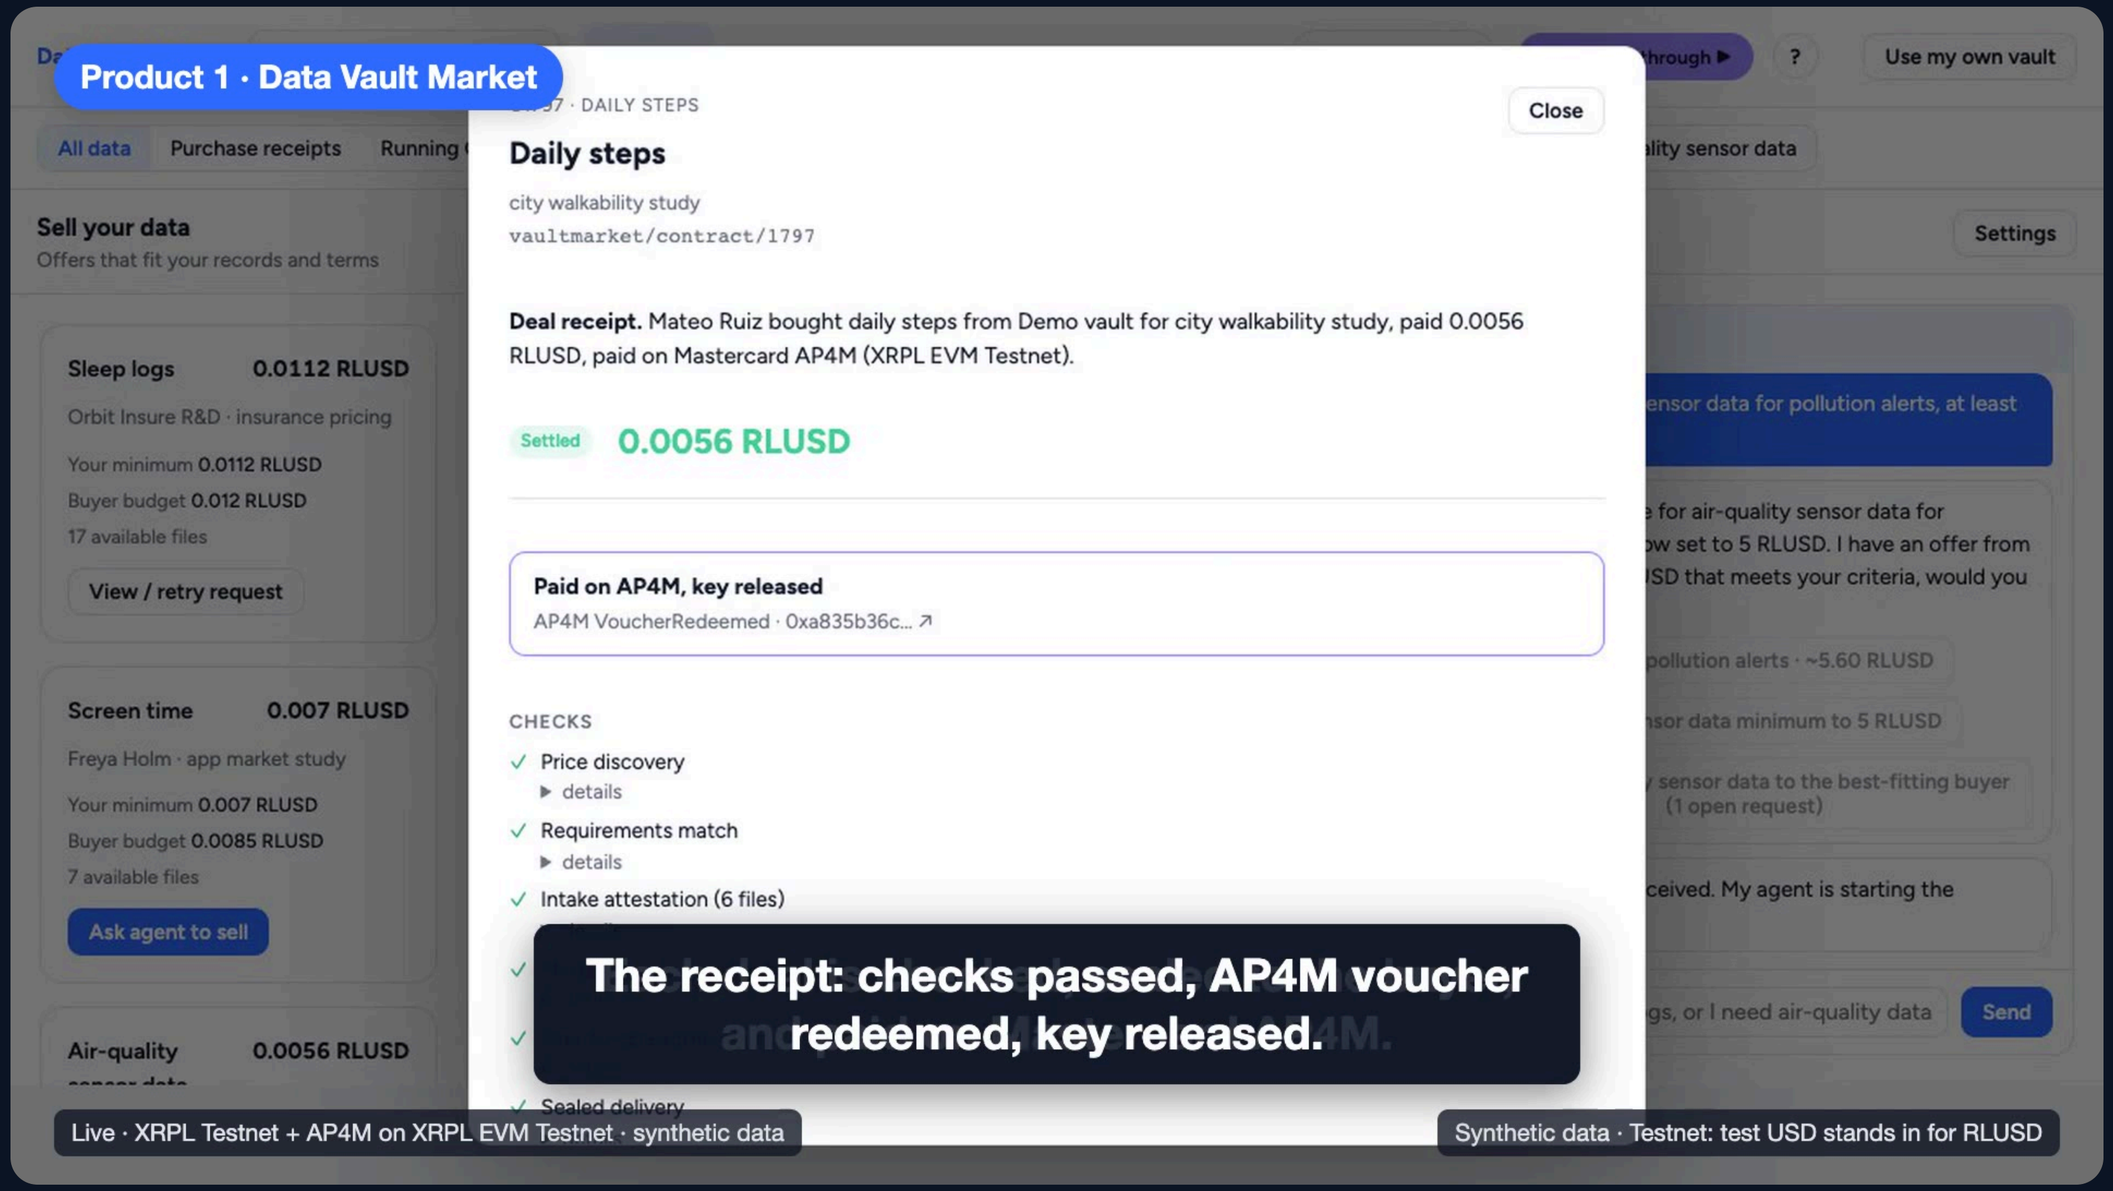

SECURITY LAYER UNDERNEATH

- **Payment = key** — the key is released by the payment itself
- **Provenance first** — tampered data gets 0 before payment
- **Push, not read** — sealed to the buyer; platform holds no keys
- **Withdraw on-chain** — licence clawed back, unreleased rounds refunded
- **Says no** — to injected or out-of-scope requests

DEMO 1 · DATA VAULT MARKET

Bought, sold and settled on the ledger, live.

WHO WE ARE · SPORTIQUE

We build health research on personal data vaults: one person, many studies.

UniQdata

Participant app. One personal DB for wearable, clinic and survey records. She decides which study gets what.

UniQLab

Researcher console. Labs design studies, ask for exactly the data they need, and pay per contribution.

One-to-many

One relationship with an institution, many sub-projects under it. No new contract each time.

HEALTH DATA ISN'T ALL THE SAME

The more sensitive the data, the less the agent decides alone.

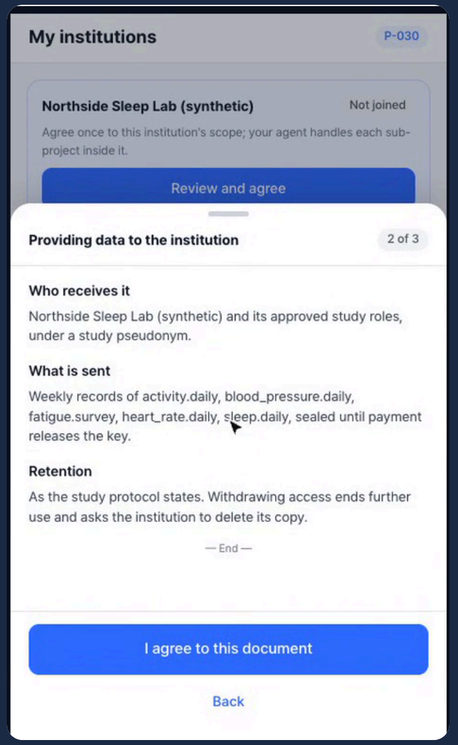

T0	**Daily**	Steps, sleep, heart rate	**Her agent acts alone**
T1	**Lifestyle**	Meals, mood, surveys	**Her agent acts alone**
T2	**Clinical**	Diagnoses, labs, blood pressure	**Needs a valid IRB credential**
T3	**Highly sensitive**	MRI, CT, genome	**Never alone: her fresh passkey, every time**

46 data columns tagged by tier · every request runs four checks: hard gates → tier → buyer grade → scope

UNIQDATA × UNIQLAB

Vault Agent
by SportiQue

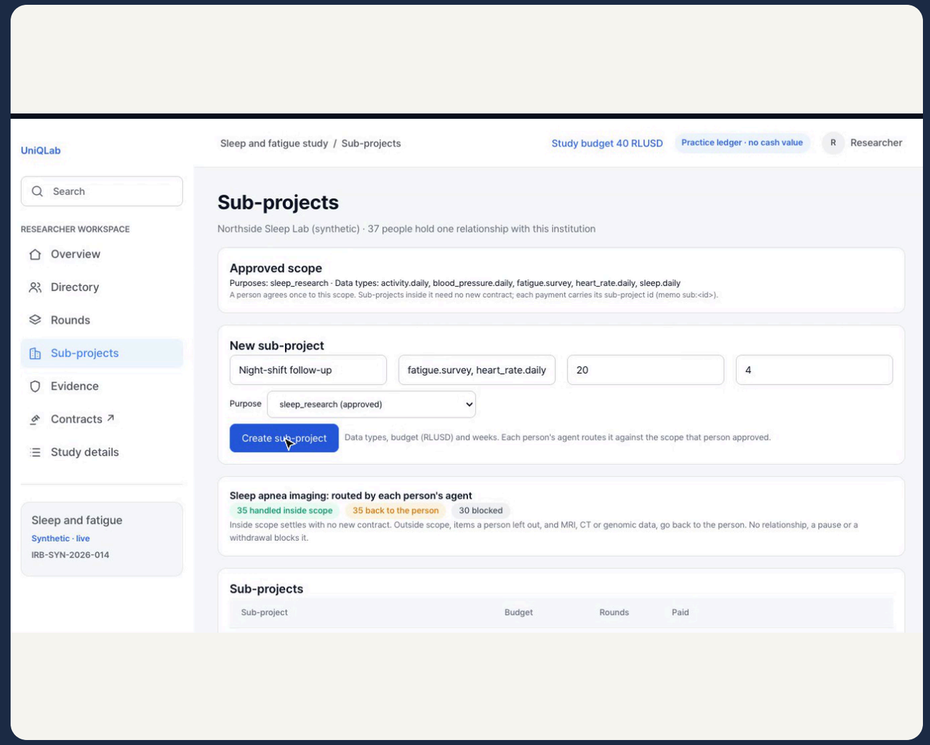

She agrees once. Her agent handles the rest.

PARTICIPANT · UNIQDATA

Agree once per institution

- Reads who gets what, and for how long
- One passkey signs the consent
- Her agent answers each new sub-project

RESEARCHER · UNIQLAB

Post a sub-project, the agent routes it

- Inside her scope: handled automatically
- New purpose or MRI: back to her
- Quality checked on arrival, paid weekly

DEMO 2 · UNIQDATA × UNIQLAB

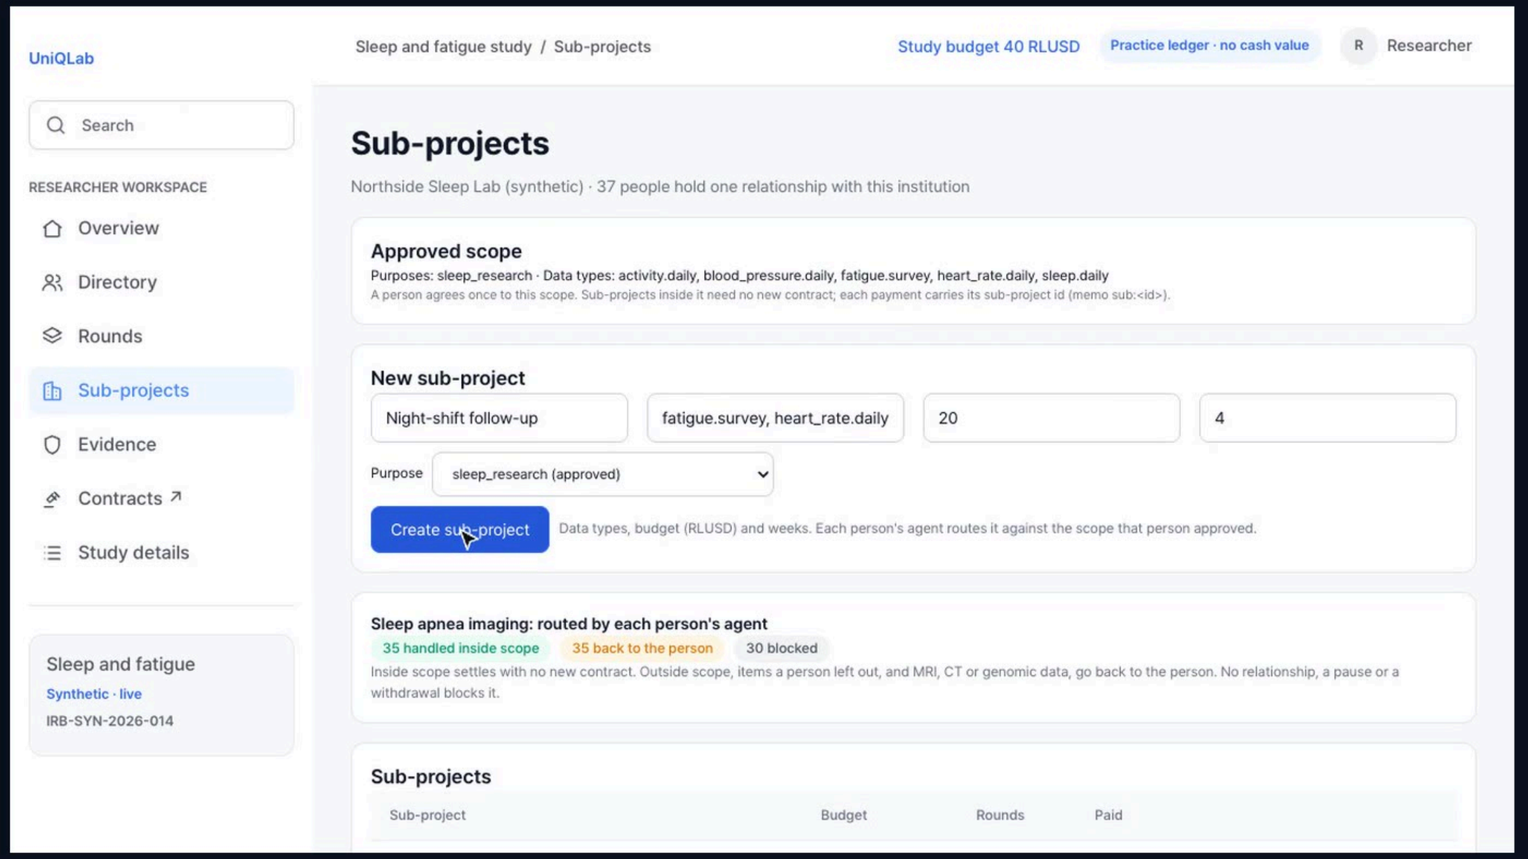

Consent by her policy. The lab's agent does the rest.

WHY IT'S DIFFERENT

Others check the buyer's budget. We also check the person's terms.

3 paid · 1 refused

Live on Mastercard AP4M: receipts verified on-chain, the over-cap request refused. Plus a mainnet transaction carrying our source tag.

AP4M run Oct 25 2026, XRPL EVM Testnet · VoucherRedeemed 0x318d…, 0x4990…, 0x7e27… · Testnet: test USD stands in for RLUSD

Vault Agent
by SportiQue

The owner sets the terms.
Agents do the deal.
AP4M pays.

Vision: every person’s data in a vault with its own agent, and every data market running on the owner’s terms.

Our ask: one research team for a paid pilot.
